

UL's Lightning Protection Certificate Services

Architects and Designers

Architects worldwide can benefit from the installation of lightning protection systems. The addition of a lightning protection system to structural designs will provide protection from physical damage and reduces the likelihood of fire. UL is the only OSHA accredited nationally recognized testing agency offering Master Label® Certificate inspections for lightning protection systems. UL offers over 100 years of technical expertise around the world. Master Label® Certificates have been issued on buildings such as the White House, Sears Tower, and the US Treasury.

Inspection Standards

- UL96A
- NFPA 780
- Government/Military Specs
- IEC
- Other nationally recognized standards

Inspection Documents

- Master Label® Certificate – Indicates a fully compliant system
- Letter of Findings – Offered for limited scope or partial structure

Additional Services

- UL University – Lightning Protection Seminar – www.uluniversity.com
- Advisory Services – Consultation services for design processes
